RoxygenNote 7.3.2

Contents

---

theme_min   *A customized ggplot theme.*

Description

A customized ggplot theme, based on 'ggplot2'::`theme_bw`.

Usage

```
theme_min(base_size = 11, base_family = "", completeQ = FALSE)
```

Arguments

base_size	base font size
base_family	base font family
completeQ	logical: provides the explicit `complete` argument to `theme`. This may be helpful when using other packages which use 'ggplot2'.

Details

This is a custom 'ggplot2'::theme. Its main features include center aligning of all labels, a lightening of plot backgrounds, and lightening of grid lines. Its main design goal is to maximize the data to ink ratio.

Value

The function returns a list of theme parameters, but is normally called for its side effect of setting the theme of a ggplot object.

See Also

'ggplot2'::theme_bw

Examples

```
## Not run: theme_min()
```
